

Lean Engineering Programme

What is the programme?

This programme is designed to teach our employees in the exacting quality standards and procedures demanded in today's fast paced cleaning industry. All our Managers complete a series of apprenticeships delivered by an experienced team of coaches who closely work with our managers developing their lean manufacturing and performance knowledge and skills.

What does it provide?

- Greater understanding of health and safety regulations and law, environmental compliance.
- Development of individual roles and responsibilities, improving flexibility within the organisation.
- Continuous improvement tools and techniques such as problem solving, workplace organisation.
- More in-depth bespoke CI knowledge in areas such as lean manufacturing (Kaizen etc), development of standard operating procedures.
- Carry out work on a workplace continuous improvement project.
- The opportunity to gain an accredited Level 2 Diploma in Manufacturing (skills & knowledge).

What are the key outcomes?

This development step broadens our Managers continuous improvement knowledge and skills. Providing an Ideal development progression pathway for managers that lead effective teams. This maintains the focus on continuous improvements and the introduction to the key principles, tools and concepts of Six Sigma methodology to be applied in a work culture that embraces change.

Great emphasis is placed upon problem solving techniques, improvement project selection, problem definitions, business cases for change. This also includes Process & Value Stream Mapping, (SIPOC), Process Flow Analysis and Root Cause Analysis.
